

Continuation of last lecture - 6

Write a program that takes two numbers from the user and an operation (such as +, -, /, *) and displays the result.

► Expected output :

```
Enter 1st Number : 5
Enter 2nd Number : 4
Enter an operation (+,-,*,/) : +

Result : 5 + 4 = 9
```

Loop – Repetition structure

1. FOR LOOP
2. WHILE LOOP
3. DO WHILE LOOP

Example

```
int sum ;  
sum = 1+2+3+4+5+.....+10 ;  
cout << sum ;
```

Find the Sum of the first 100 Integer
starting from 1

for Loop

For loop

```
for ( initialization condition ; termination condition ; increment condition )  
{  
    statement ( s ) ;  
}
```

Example

```
int counter ;  
for( counter = 0 ; counter < 10 ; counter = counter + 1 )  
    cout << counter;
```

Output

0123456789

Table for 2

$$2 \times 1 = 2$$

$$2 \times 2 = 4$$

$$2 \times 3 = 6$$

:

:

$$2 \times 10 = 20$$

Output

$$2 \times 1 = 2$$

$$2 \times 2 = 4$$

$$2 \times 3 = 6$$

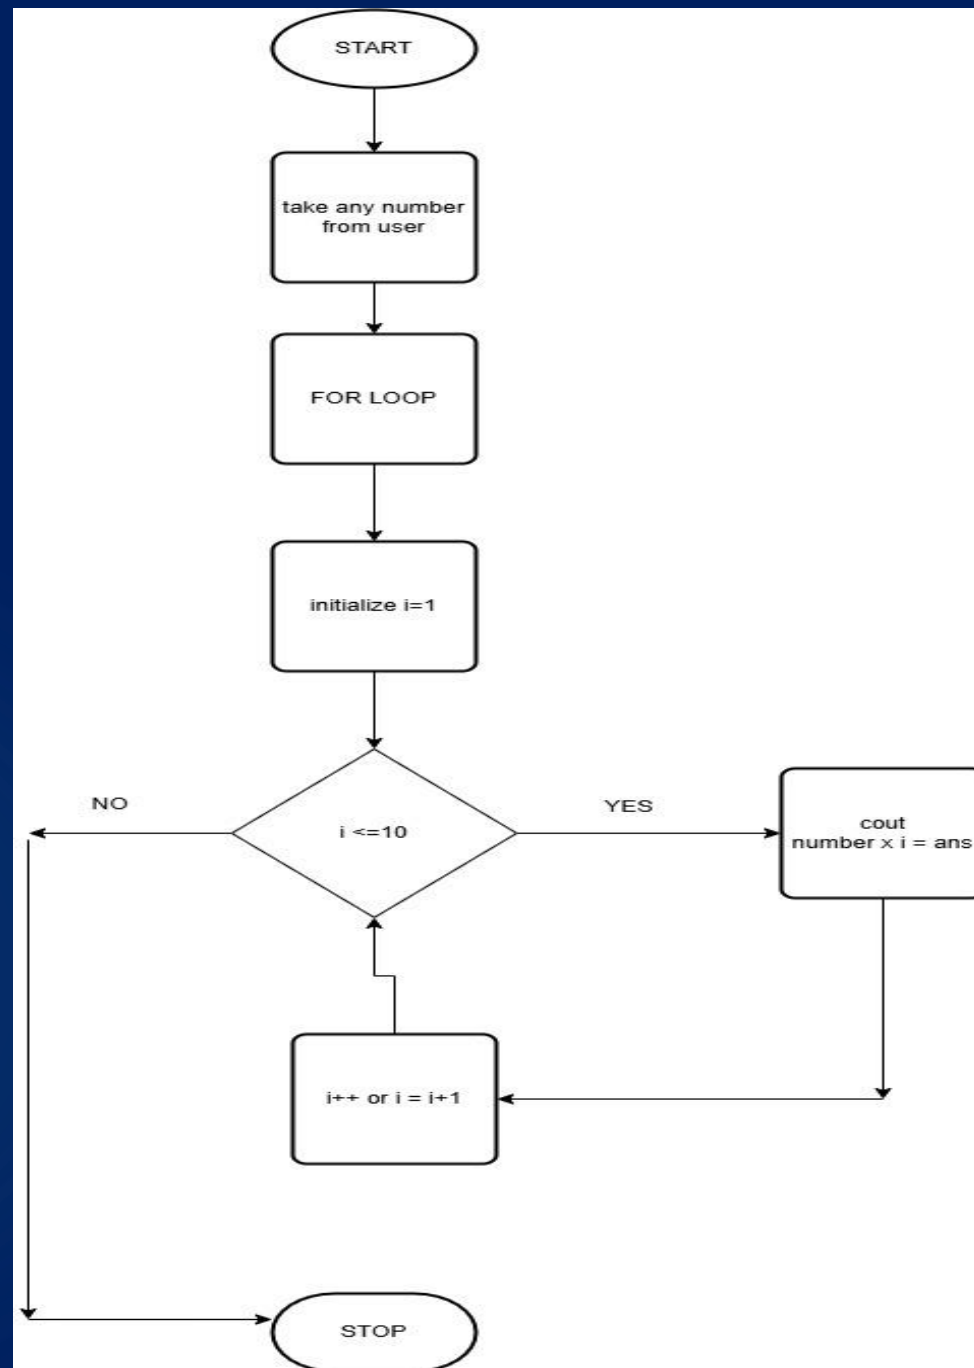

:

:

$$2 \times 10 = 20$$

- 
- ▶ Always think re-use
 - ▶ Don't use explicit constants

- 
- ▶ Create a flowchart of the program which calculating the Table of 2

Code

```
int num;

cout<<"Enter number of table you desire:"<<endl;
cin >> num;

for(int i=1;i<=10;i++)
{
    cout << num<< " X " << i << " = " << num*i<<endl;
}
```

while

```
while ( Logical Expression )  
{  
    statements;      :  
}
```

Find the Sum of the first 1000 Integer
starting from 1

Example

```
int sum , number ;  
sum = 0 ;  
number = 1 ;  
while ( number <= 1000 )  
{  
    sum = sum + number ;  
    number = number + 1 ;  
}  
cout << " The sum of the first 1000 integer starting from 1 is " << sum  
;
```

Property of While Statement

**It executes zero or more
times**

do-while

**Do while loop execute on
or more times**

Syntax of do-while loop

```
do
{
    statements ;

}
while ( condition ) ;
```

Create a simple character guessing game where the player has to guess a secret character within a limited number of attempts (i.e. 5).

Example-Guessing game

```
char c ;
int tryNum = 1 ;
do
{
    cout << "Please enter your guess by pressing a character key from a to z " ;
    cin >> c ;
    if ( c == 'z' )
    {
        cout << "Congratulations! you guessed the right answer" ;
        tryNum = 6 ;
    }
    else
        tryNum = tryNum + 1 ;
} while ( tryNum <= 5 ) ;
```
